Typical Chlorinator Installation

Note: Most water systems require final filtering to completely remove precipitated iron and manganese from chlorinated water. See your Autotrol brand chlorination dealer about installing an Autotrol brand backwash filter control valve system.

Autotrol Dry Pellet Chlorination

True to its long-standing commitment to performance, quality and innovation, the Autotrol line of chlorination equipment is proven to provide sanitized water for agricultural and residential applications. Designed to eliminate iron waterborne diseases and contaminants as well as iron bacteria and hydrogen sulfide gas, Autotrol chlorination equipment utilizes dry pellet chlorination for safer, stronger, more effective water sanitization. Whether it is a farm or a home well, Autotrol brand chlorination equipment economically delivers cleaner, better tasting water. Chlorinators should be installed in accordance to state and local codes.

Advantages of Dry Pellet Chlorination

- Safe, EPA-approved chlorine chemical
- Easy-to-handle, economical, reliable and highly concentrated—treats water problems at the source
- Longer lasting than liquid chlorine—chlorinates evenly through the well and is impervious to freezing temperatures, with reduced fumes, no hazardous spillage and no chemical loss due to evaporation
- Eliminates the need for a costly, space consuming retention tank in most cases
- Reduces iron bacteria and clogged well pumps, iron-stained sinks and appliances, bad water taste and rotten egg smell, hydrogen sulfide, slime buildup in the well, black water and algae

Autotrol Brand Products—Better Business For Your Business.

Autotrol Brand Well Sanitizer™ Pellets

Autotrol Well Sanitizer pellets are safe, convenient and highly concentrated, providing an effective alternative to the hazards of liquid chlorination. Semi-soft and fast dissolving, Well Sanitizer pellets are small enough to pass through small restrictions in the well, yet they deliver powerful chemical action that sanitizes the entire water capacity within the well.

- Perfect for shock treating wells after service
- 70% concentration for powerful chemical action
- Lasts longer than liquid chlorine
- Effectively chlorinates the entire well water column
- Helps eliminate residue buildup on pumps, on well casings below the water line and in pipelines throughout the water delivery system
- Small pellets for easy handling eliminates splashing and staining of clothing or skin irritation
- 4-pound containers are approved for safe travel by the United States Department of Transportation
- EPA-registered specifically for treating potable water (reg. No 50510-1)
- Certified by NSF to ANSI/NSF Standard 60
